

Your robot session

Monash FYP | Participant instructions | 9 September 2026 | v1.1

What you will do

You will do a guided panel-handling task with a robot. We are studying how people experience the task and how the robot behaves during it. We are evaluating the system, not your ability. There are no right or wrong questionnaire answers.

You will complete three blocks called **A, B and C**, with three trials in each block: **nine trials altogether**. The team will explain and demonstrate the task before you begin.

Before starting

Read the study information and complete the consent process with the team. Ask about anything that is unclear. Then scan the dashboard QR code and check your participant code before completing the intake questions. The team will help you put on and calibrate the motion-capture equipment. Tell them if anything is uncomfortable or restricts your movement.

During each trial

1. Wait at the marked start position with the panel.
2. When instructed, take the panel to the low gripper and hold it in the demonstrated position. Keep supporting it until the operator tells you to let go.
3. Return to the start marker. The robot will lift the panel when the operator starts it.
4. During the lift, either remain at the marker or perform the one demonstrated movement when the operator says **NOW**. Return as demonstrated and wait. The operator will tell you which action applies before each trial.
5. When the robot is stationary and the operator invites you, approach and perform the demonstrated panel task. Return to the start marker when instructed.
6. Wait while the robot lowers the panel. Approach and support it only when instructed; the operator will then release the gripper.

Keep within the demonstrated route and limits. Do not improvise a movement, trip, fall or try to test the robot's limits. Do not try to catch a falling panel.

Your feedback

Scan a QR code **before the trials, after each block, and once at the end**: five form submissions altogether. No form is needed between trials within a block. Check your participant code and the block letter shown on the dashboard. Answer privately about what you experienced. Ask for help if a question is unclear.

You can pause or stop

Say **STOP** if you want to stop, feel discomfort or are unsure. The operator will stop the activity and follow the demonstrated stop procedure. You may ask for a break or end your participation without giving a reason. The team will explain the stop procedure and point out the waiting area before starting.

Motion and questionnaire records use a participant code. Any video is identifiable and is handled according to the study information and your recorded permission. This task guide accompanies, and does not replace, that information or your consent choices.
